Understanding Operators:

- In java there are mainly '4' types of operators. They are

  ➤ Increment & Decrement Operators

  ➤ Arithmetic Operators

  ➤ Relational Operators

  ➤ Logical Operators

Increment & Decrement operators (2)

➤ ++ is used as Increment operator (increases value by 1)

➤ -- is used as Decrement operator (decreases by 1)

➤ Both Increment & Decrement operators are classified in to 2 types.

Increment

Pre Increment
a=++b;

Post Increment
a=b++;

Decrement

Pre Decrement
a=--b;

Post Decrement
a=b--;
